Request for Access to Tiger Data for Academic AI Capstone Project

Date: 20th May 2026

To,
The Chief Wildlife Warden,
Directorate of Forests, Wildlife Wing,
Bikash Bhawan (North Block), 3rd Floor,
Salt Lake City, Kolkata, West Bengal - 700091

Subject: Request for Access to Tiger Data for Academic AI Capstone Project

Respected Sir/Madam,

The participants of the Executive Program in AI for Business (Batch 5) at Indian Institute of Management Lucknow are currently undertaking a capstone project titled:

“AI-Driven Tiger Enumeration using Computer Vision”

The objective of this project is to explore the application of Artificial Intelligence and Computer Vision techniques to improve tiger identification and population estimation processes in the Sundarbans Tiger Reserve.

At present, tiger enumeration involves manual analysis of thousands of camera trap images to identify individual tigers based on their stripe patterns. This process is time-intensive, resource-heavy, and susceptible to human error. Through this project, they aim to develop an AI-driven system capable of:

- Automatically detecting tigers from camera trap images
- Identifying and differentiating individual tigers using stripe pattern recognition
- Supporting more accurate and efficient population estimation processes

We understand that the Forest Department possesses valuable historical camera
